

FRYIN SERIES OIL FRYER

Our continuous fryer is suitable for frying a variety of products with special heating technology, including products of sliced, long narrow, granule, and even irregular shape. The continuous fryer has the characteristics of “two highs and three savings”, allowing customers not only can maintain excellent production quality but also food hygiene and operational safety. Also, we owned patents in Germany, United States and many other countries.

Our continuous fryer is made of stainless steel to meet the requirements of food hygiene regulations. Besides, our fryer is equipped with CIP system, which can reduce manual cleaning time. The fryer hood can prevent product from being contaminated by falling materials during production process. Our fryer has an automatic temperature control system, which is adjustable according to the frying temperature of different products.

Moreover, we use multimedia touchscreen to integrate the instantaneous current and voltage monitoring during various productions. We also provide remote control service, it could shorten your time that usually have to wait for engineering staff to overhaul. You can monitor, modify, repair or update the system, repair software and other services all at once by using this system.
